1. The following is an examiner's statement of reasons for allowance: Prior art does not disclose reference current generator ,generating reference current having a level which corresponds to the size of a motor current flowing into a drive motor for driving power window, first current generator, generating first current which is part of reference current and corresponds to a variable quantity in motor current, second current generator generating second current which is part of reference current and to which adding the first current results in the prescribed reference current, comparison signal generator, garneting a comparison signal by converting fist current into voltage, comparator comparing comparison signal with reference voltage signal generated on basis of first current and reverser , stopping or reversing motor based on result of comparator which determine that a steep current increase is occurring in the motor current; wherein when first current repeats decrease and increase in excess of a predetermined value in a predetermined period, the second current is increased for a predetermined period in respective cycles of decrease and the increase of the first current so that the increase of first current is relatively retrained or the decrease of the fist5 current I relatively promoted for decreasing a detection sensitivity to a current increase in the motor current. .

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
